
Accept Blue Payment Gateway – Installation Manual for OpenCart 3.x

Step-by-step installation manual for the **Accept Blue Payment Gateway** extension for **OpenCart 3.x**. This guide assumes that the extension is provided in a standard .ocmod.zip format, which is typical for OpenCart 3 extensions.

Prerequisites

1. **OpenCart Version:** Make sure you're using **OpenCart 3.x**.
 2. **Admin Access:** You need full administrator access to the OpenCart admin panel.
 3. **Extension File:** Ensure you have the accept_blue.ocmod.zip file from the official source or developer.
-

Step-by-Step Installation Guide

Step 1: Log in to OpenCart Admin

- Go to your OpenCart admin panel.
- Example: <https://yourstore.com/admin>
- Enter your admin credentials.

Please enter your login details.

Step 2: Upload the Extension

1. Go to **Extensions > Installer**.

2. Click the **Upload** button.

3. Select the `accept_blue.ocmod.zip` file from your computer.
4. Wait until you see a **success message** indicating that the extension has been uploaded.

Step 3: Install the Extension Module

1. Go to **Extensions > Extensions**.

2. In the dropdown, select **"Payments"**.

3. Find **Accept Blue** in the list.

4. Click the green **Install (+)** button.

5. Once installed, click the **Edit (🖋)** button to configure it.

Step 4: Configure the Accept Blue Extension

Here you need to enter API credentials and other necessary settings.

Accept Blue Home > Extensions > Accept Blue

Edit Accept Blue

* Tokenization Key	*****
* Source Key	*****
* PIN Code	****
Tokenization Key (Sandbox)	*****
Source Key (Sandbox)	*****
PIN Code (Sandbox)	****

- **Pin code (Sandbox):** Provided by Accept Blue
- **Order Statuses:** Set appropriate status for successful and failed payments

Payment Method Configuration Settings

The following settings are available individually for each supported payment method: **Credit Card**, **Apple Pay**, and **Google Pay**.

Credit Card Settings

Credit Card		Google Pay	Apple Pay
Transaction Mode	Test Mode		
Transaction Method	Authorize and Capture		
Total	0.5		
Order Status	Pending		
Geo Zone	All Zones		
Status	Enabled		
Sort Order	1		

- **Transaction Mode** – Define the mode of transaction (e.g., Test or Live).
- **Transaction Method** – Specify the transaction type (e.g., Authorization, Sale).
- **Total** – Minimum order total required for this payment method to be available.
- **Order Status** – The default order status after a successful transaction.
- **Geo Zone** – Restrict this payment method to specific geographic zones.
- **Status** – Enable or disable the payment method.
- **Sort Order** – The display order relative to other payment methods at checkout.

Google Pay Settings

Credit Card		Google Pay	Apple Pay
Google Pay Merchant ID	*****		
Merchant Name	OST		
Transaction Mode	Test Mode		
Transaction Method	Authorize and Capture		
Total	1		
Order Status	Pending		
Geo Zone	All Zones		
Status	Enabled		
Sort Order	0		

- **Google Pay Merchant ID** – Your unique Google Pay merchant identifier.
- **Merchant Name** – The name displayed to users during checkout.
- **Transaction Mode** – Define the mode of transaction (e.g., Test or Live).

- **Transaction Method** – Specify the transaction type (e.g., Authorization, Sale).
- **Total** – Minimum order total required for this payment method to be available.
- **Order Status** – The default order status after a successful transaction.
- **Geo Zone** – Restrict this payment method to specific geographic zones.
- **Status** – Enable or disable the payment method.
- **Sort Order** – The display order relative to other payment methods at checkout.

Apple Pay Settings

Field	Value
Apple Pay Merchant ID	*****
Merchant Name	Merchant Name
Transaction Mode	Test Mode
Transaction Method	Authorize and Capture
Total	1
Order Status	Pending
Geo Zone	All Zones
Status	Enabled
Sort Order	3

- **Apple Pay Merchant ID** – Your unique Apple Pay merchant identifier.
- **Merchant Name** – The name displayed to users during checkout.
- **Transaction Mode** – Define the mode of transaction (e.g., Test or Live).
- **Transaction Method** – Specify the transaction type (e.g., Authorization, Sale).
- **Total** – Minimum order total required for this payment method to be available.
- **Order Status** – The default order status after a successful transaction.
- **Geo Zone** – Restrict this payment method to specific geographic zones.
- **Status** – Enable or disable the payment method.
- **Sort Order** – The display order relative to other payment methods at checkout.

Make sure you test API credentials in **sandbox mode** before going live.

Step 5: Modify Cache & Refresh Modifications

1. Go to **Extensions > Modifications**.

2. Click the **Refresh** (↻) button in the top right.

Step 6: Test the Payment Method

1. Place a test order on your storefront.
2. Go through the checkout process and ensure the **Accept Blue** payment method is displayed.
3. Complete the order and verify if:
 - o The payment goes through
 - o The order status updates correctly
 - o Notifications/emails are sent if configured
