Accept Blue Payment Gateway – Installation Manual for OpenCart 4.x

Here is a **proper, step-by-step installation manual** for the **Accept Blue Payment Gateway** extension for **OpenCart 4.x**. This guide assumes that the extension is provided in a standard .ocmod.zip format, which is typical for OpenCart 4 extensions.

Prerequisites

1. **OpenCart Version:** Make sure you're using **OpenCart 4.x**.

2. **Admin Access:** You need full administrator access to the OpenCart admin panel.

3. **Extension File:** Ensure you have the accept_blue.ocmod.zip file from the official source or developer.
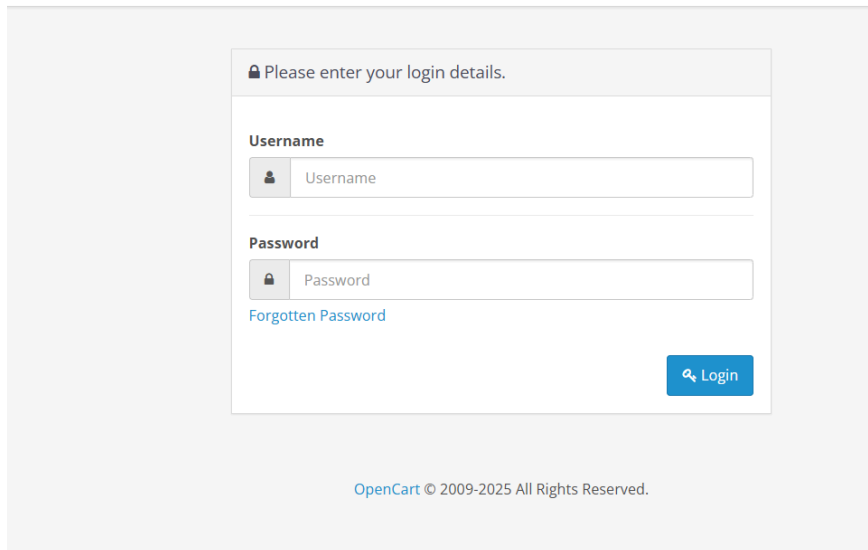

Step-by-Step Installation Guide

Step 1: Upload Files via FTP

1. Extract the extension package on your local computer.

2. Locate the admin/ and system/ folders inside the package.

3. Use an FTP client (e.g., FileZilla) or your hosting file manager.

4. Upload:

   o The contents of the admin/ folder to your server's /admin/ directory

   o The contents of the system/ folder to your server's /system/ directory

Do not overwrite existing files unless they are part of the Accept Blue extension. Always back up your site before making changes.

Step 2: Log in to OpenCart Admin

- Go to your OpenCart admin panel.

- Example: https://yourstore.com/admin

- Enter your admin credentials.

Please enter your login details.

Step 3: Upload the Extension

1. Go to **Extensions > Installer**.
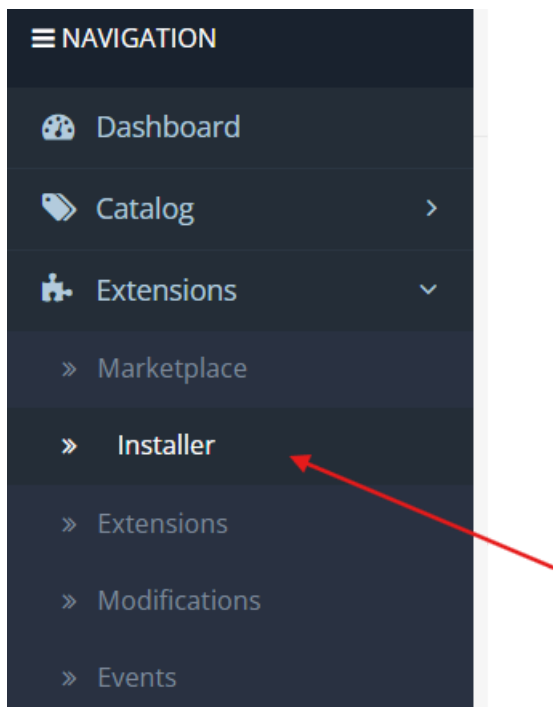

2. Click the **Upload** button.

3. Select the accept_blue.ocmod.zip file from your computer.

4. Wait until you see a **success message** indicating that the extension has been uploaded.

**Step 4: Install the Extension Module**

1. Go to **Extensions > Extensions**.

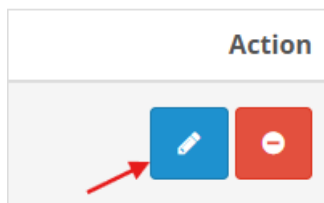

2. In the dropdown, select **"Payments"**.

3. Find **Accept Blue** in the list.

Payment Method	
Accept Blue	accept.blue

4. Click the green **Install (+)** button.

Disabled			

5. Once installed, click the **Edit (✏️)** button to configure it.

Action

Step 5: Configure the Accept Blue Extension

Here you need to enter API credentials and other necessary settings.

Accept Blue Home › Extensions › Accept Blue

✏️ Edit Accept Blue

* Tokenization Key	*********************************
* Source Key	*********************************
* PIN Code	****
Tokenization Key (Sandbox)	*********************************
Source Key (Sandbox)	*********************************
PIN Code (Sandbox)	****
Refund Order Status	Canceled Reversal
Void Order Status	Complete

- **Tokenization Key:** Provided by Accept Blue
- **Source Key:** Provided by Accept Blue
- **Pin code:** Provided by Accept Blue
- **Tokenization Key (Sandbox):** Provided by Accept Blue

- **Source Key (Sandbox):** Provided by Accept Blue

- **Pin code (Sandbox):** Provided by Accept Blue

- **Order Statuses:** Set appropriate status for successful and failed payments

Payment Method Configuration Settings

The following settings are available individually for each supported payment method: **Credit Card**, **Apple Pay**, and **Google Pay**.

Credit Card Settings

- **Transaction Mode** – Define the mode of transaction (e.g., Test or Live).

- **Transaction Method** – Specify the transaction type (e.g., Authorization, Sale).

- **Total** – Minimum order total required for this payment method to be available.

- **Order Status** – The default order status after a successful transaction.

- **Geo Zone** – Restrict this payment method to specific geographic zones.

- **Status** – Enable or disable the payment method.

- **Sort Order** – The display order relative to other payment methods at checkout.

Google Pay Settings

- **Google Pay Merchant ID** – Your unique Google Pay merchant identifier.

- **Merchant Name** – The name displayed to users during checkout.

- **Transaction Mode** – Define the mode of transaction (e.g., Test or Live).

- **Transaction Method** – Specify the transaction type (e.g., Authorization, Sale).

- **Total** – Minimum order total required for this payment method to be available.

- **Order Status** – The default order status after a successful transaction.

- **Geo Zone** – Restrict this payment method to specific geographic zones.

- **Status** – Enable or disable the payment method.

- **Sort Order** – The display order relative to other payment methods at checkout.

Apple Pay Settings

- **Apple Pay Merchant ID** – Your unique Apple Pay merchant identifier.

- **Merchant Name** – The name displayed to users during checkout.

- **Transaction Mode** – Define the mode of transaction (e.g., Test or Live).

- **Transaction Method** – Specify the transaction type (e.g., Authorization, Sale).

- **Total** – Minimum order total required for this payment method to be available.

- **Order Status** – The default order status after a successful transaction.

- **Geo Zone** – Restrict this payment method to specific geographic zones.

- **Status** – Enable or disable the payment method.

- **Sort Order** – The display order relative to other payment methods at checkout.

Make sure you test API credentials in **sandbox mode** before going live.

Step 6: Modify Cache & Refresh Modifications

1. Go to **Extensions > Modifications**.
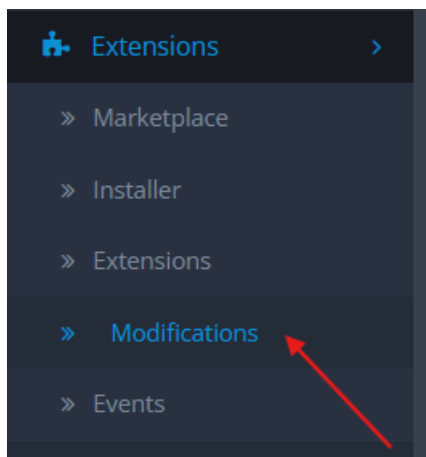

2. Click the **Refresh (⟳)** button in the top right.

Step 7: Test the Payment Method

1. Place a test order on your storefront.

2. Go through the checkout process and ensure the **Accept Blue** payment method is displayed.

3. Complete the order and verify if:

   o   The payment goes through

   o   The order status updates correctly

   o   Notifications/emails are sent if configured
